## FESTINA CHRONOBIKE 2026. THE MYTH

In the watchmaking industry, Festina stands out for its ability to interpret trends and offer timepieces that not only tell the time, but also reflect the personality and lifestyle of those who wear them. If there is one field in which the brand has proven its mastery, it is in the creation of sports watches: dynamic watches capable of conveying the energy, character, and determination of their users.

Within this universe, the iconic Festina Chrono Bike model, first introduced in 1997, has established itself as one of the brand's greatest references. This collection of sports watches has become a symbol for those who value watchmaking precision, robust design, and an aesthetic defined by performance and action.

In 2026, Festina presents a new edition

of its Chrono Bike collection which, true to its essence, stands out for a pure and vibrant sporty design. Every detail has been carefully conceived to evoke the excitement, intensity, and adrenaline of great challenges, resulting in a high-precision instrument that allows time to be measured accurately both in demanding situations and in the rhythm of everyday life.

Festina has been linked to the world of sport and to time measurement in high-performance contexts, accompanying great protagonists in some of the most demanding scenarios. That legacy has forged a close relationship with values such as effort, perseverance, and personal achievement, shared by professionals and enthusiasts who always strive to go one step further.

That same spirit inspires Festina in its constant pursuit of excellence. Dedication, commitment, and self-improvement are the fundamental pillars that guide the

creation of the highest-quality watches. The Festina Chrono Bike 2026 stands out for its robust and resistant case, made of stainless steel, highly resistant to impacts, scratches, and corrosion. In addition, it is a hypoallergenic material designed to protect the wearer's skin while safeguarding the high-precision quartz mechanism with MOS10 movement. This edition includes several models, among them a limited edition, a special edition, and a connected model. The dials, available in on-trend colors, offer excellent legibility and functionality.

Three subdials provide the watch with a high-precision chronograph function, and at 3 o'clock the date is displayed (except in the connected model). The main dial, with applied and luminous steel indexes, together with the large luminous hands, allows time to be read even in very low-light conditions.

The new edition of the Festina Chrono Bike collection is available in different versions:
